ТОВ ВТП "АСМА-ПРИЛАД"

LCT plastic tensile impact testing machine is used to execute tensile-impact test of plastics or insulaton materials under defined condition, as tensile tests at relatively high strain rates; measure the tensile-impact strength and permanent break elongation rate, especially for materials too flexible or too thin to be tested use Charpy or Izod impact tester.

This testing machine is widely used in the scientific research unit, the universities, colleges and institutes, the production enterprise and the examination department.

Conform with ISO8256-1990 "Plastic Stretch Impact Intensity Determination" and American standard ASTM D1822 "Plastic And Electric insulation Material Stretch Impact Performance test Method".
